# THANK YOU, JUPITER BROADCASTING!

Hello, Chris!

I know you've heard me say this before, but I am so thankful for Jupiter Broadcasting opening my eyes to the exciting possibilities of how far we can take open-source software and how Linux would eventually bring immense value to both my career and my podcasting / Linux adventures at home. And if that wasn't enough, I also have you to thank for discovering value for value and Podcasting 2.0. This Atari VCS was begging for a new home, and I dare say you and the JB crew are going to have a load of fun with it!

One small bit of history: While I had little time to play with the console itself, the gamepad included in this package was a huge part of my online Hotshot Racing adventures with Martin Wimpress and a merry band of racing enthusiasts. The QR code below takes you to my favorite racing session!

Speaking of open-source, this letter was written with a completely open-source stack and the source available on a GitHub repo[1]:

- OS: KDE Neon 22.04
- Editor: RStudio IDE[2]
- Publishing Engine: Quarto[3]
- Computing Language: R[4] (of course)

Sincerely,

Eric Nantz (R-Podcast)
